

TRAPUNIT

Poison-free rodent box with trap and LED indicator

New legislation for rodent control in EU

New EU rules prohibit the use of poison preventing rat attacks. Poison is still allowed to be used for acute attacks, but if you have pets or domestic animals, e.g. hens etc. poison-free prevention is the safest and best solution.

LED indicator

This poison-free rodent-trap solution makes it possible to prevent rodent attacks. In addition, it is easy to find out, if there is rodent activity. If the trap is triggered, a **red** LED flashes on top of the box. Everyone in the household can see if there is a rat in the trap. Watch demo video on www.trapunit.com.

Only dangerous for rodents

The metal box is a galvanized quality box fitted with a solid and strong plastic trap that effectively kills the rat. The trap is mounted behind shields and the rat / mouse must pierce a perforated cardboard to get to the trap. The perforated cardboard sheets ensures that birds and similar small animals do not empty the lure in the trap, or are being trapped. The cardboard slices can be replaced if/when they are destroyed by rodents.

Incapsulated electronic

The electronics in the LED module are glue encased to protect it from moisture and ensuring long life. The module uses two standard AA batteries. The battery life is +5 years, consuming power only when the trap is triggered. When the trap is triggered, the flashing time is up to two months, depending on the quality of the batteries and ambient temperature. The LED module also has a LOW bat feature, so there is a warning if the batteries are discharged..

TrapUnit Basic, metal-box with build-in rodent trap - with LED indicator.

The box viewed from above with no cover. The rat-trap is mounted behind screen walls that ensures that only rodents can get to the trap. Patented gnaw-through pierced paper walls ensure that only rats and mice (and not birds) can get to the trap. These paper walls are exchangeable when damaged. Next to the rat trap, there is room for clicking a mouse trap into the bottom plate, this is an option at extra cost.

Guideline price for the end-user
39,90 € incl. VAT
